

Conductors for Electrical Distribution; Their Materials and Manufacture, the Calculation of Circuits, Pole-Line Construction, Underground Working, and Other Uses Volume 2

By Frederic Auten Combs Perrine

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 edition.

Excerpt: .requiring different E. M. F. s, but consuming the same value of the current. Series Multiple Connection. The current, as before in a series system, is the current required by any single translating device, or any one multiple of translating devices, the E. M. F. being equal to the sum of the various E. M. F. s demanded by the different translating devices and multiples along the line. In the multiple-series distribution it is possible to connect across the opposite sides of the circuit translating devices in series so adjusted that the total E. M. F. required by each series will be the same. The current required by the different translating devices in any one series must be equal, though there is no necessity for equality of current between the different series. When so arranged, single translating devices, capable of consuming the full value of...
