

The Bulletin of the Experimental Department, Airplane Engineering Division Volume 2, No. 3

By United States Bureau Division

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 edition. Excerpt: .fuels tested have contained a greater or lesser proportion of benzine, or benzol, as it is often called, the chemical formula for which is C_6H_6 . This fluid is the most volatile constituent of coal tar, and also is obtained from petroleum. It has a boiling point of about 80 C. and a specific gravity of 0.88 to 0.89. Benzol cannot very well be used by itself as a fuel for airplane engines, as on account of its rather high boiling point, it does not vaporize readily with cold air, and consequently would cause difficulty in starting if used alone. However, it possesses a higher calorific value in relation to volume than gasoline, and as fuel is taken through the carburetor jets by volume and not by weight, it follows that the fuel of the greatest calorific value per unit of volume will Qve...

Reviews

Extremely helpful for all group of men and women. it absolutely was writtern extremely perfectly and valuable. Your way of life span will be transform when you complete looking at this ebook.

-- Prof. Trevor Torphy

This pdf may be really worth a read, and superior to other. It generally does not price too much. Once you begin to read the book, it is extremely difficult to leave it before concluding.
